Research interests

- Nonlinear econometric models for cross-section and panel data
- Health economics.
- Education economics.
- Demographic economics.
- Labour Economics.

Over the years, my research has been particularly focused in the development of strategies to deal with problems of sample selection, endogenous treatment, and endogenous participation for ordinal, count, and dichotomous variables. I have also interest in quantile regression, hazard models, generalised linear latent and mixed models, and in the development of methods to estimate non linear dynamic models.
